

Project Design Phase
Proposed Solution Template

Date	26 June 2026
Team ID	
Project Name	Student Leave Request Management
Maximum Marks	2 Marks

Proposed Solution Template:

S.No	Parameter	Description
1	Problem Statement (Problem to be solved)	Colleges often manage student leave requests manually through paper forms, emails, or verbal communication. This leads to delayed approvals, lack of transparency, difficulty in tracking request status, and inefficient communication between students and faculty.
2	Idea / Solution Description	Develop a ServiceNow-based Student Leave Automation System where students submit leave requests digitally. Requests are reviewed by the Class Teacher, who can approve, reject, or manually escalate requests exceeding five days to the HOD. The HOD can approve, reject, or modify approved leave days. Flow Designer automatically sends email notifications for approved, rejected, and escalated requests, while students can track their leave status through dedicated application views.
3	Novelty / Uniqueness	The solution combines role-based access control, manual approval workflow, digital leave tracking, email notifications, and separate Student and Faculty views within a single ServiceNow application. It eliminates paper-based processing while keeping approval decisions under faculty control.
4	Social Impact / Customer Satisfaction	The application improves transparency, reduces paperwork, minimizes approval delays, and enhances communication between students and faculty. Students receive timely updates, while faculty members can efficiently manage leave requests through a centralized platform.
5	Business Model (Revenue Model)	The solution is intended for educational institutions as an internal digital service. It can be adopted by colleges or universities as part of their campus management system. Future deployment could follow a Software-as-a-Service (SaaS) subscription model for multiple institutions.
6	Scalability of the Solution	The application is built on the ServiceNow platform and can scale to support multiple departments, academic years, and institutions. Additional modules such as attendance integration, parent notifications, academic calendars, and analytics dashboards can be incorporated without major architectural changes.
