

Project Report – Student Leave Request Management

1. INTRODUCTION

1.1 Project Overview

Educational institutions traditionally manage student leave requests through manual processes such as paper forms, emails, or verbal communication. These approaches often result in delayed approvals, poor record management, limited transparency, and difficulty in tracking the status of leave requests. Students frequently need to follow up with faculty members to determine whether their requests have been approved, while faculty members must manage multiple requests from different communication channels.

To address these challenges, this project presents the Student Leave Automation System, a web-based application developed on the ServiceNow platform. The application digitizes the complete leave approval process by providing a centralized workflow for students, Class Teachers, and Heads of Department (HODs). Students can submit leave requests through an intuitive interface, while faculty members can review, approve, reject, or manually escalate requests based on institutional policies.

The application implements role-based access control using ServiceNow roles, ensuring that students can access only their own leave requests while faculty members can manage requests assigned to them. Workflow automation is achieved through Flow Designer, which generates email notifications whenever a leave request is approved, rejected, or escalated. This improves communication, reduces administrative effort, and provides better visibility into the leave approval process.

The proposed system offers a scalable and paperless solution that enhances operational efficiency, improves user experience, and provides a structured approval workflow suitable for educational institutions.

1.2 Purpose

The primary purpose of the Student Leave Automation System is to replace the traditional manual leave approval process with a centralized digital solution developed on the ServiceNow platform. The system aims to simplify leave management by enabling students to submit requests online while providing faculty members with a structured workflow for reviewing and processing applications.

The specific objectives of the project are:

To provide a centralized platform for submitting and managing student leave requests.

To automate the leave approval workflow using ServiceNow Flow Designer.

To enable Class Teachers to approve, reject, or manually escalate leave requests to the Head of Department when required.

To provide separate Student and Faculty views with role-based access control.

To notify students through email whenever the status of their leave request changes.

To reduce paperwork, improve transparency, and enhance communication between students and faculty.

To demonstrate the practical implementation of ServiceNow application development concepts, including scoped applications, custom tables, Business Rules, Flow Designer, UI Policies, roles, and notifications.

2. PROJECT OVERVIEW

2.1 Problem Statement

	🔖 Section	≡ Description	≡ Key Issues/Emotions	+
1	I AM 👤	A college student who needs to apply for leave due to personal, medical, or family reasons	Student identity Leave necessity Multiple leave...	
2	I'M TRYING TO 📧	Request leave approval quickly and know whether my leave has been approved or rejected before missing classes	Speed requirement Status transparency Time sensitivity	
3	BUT ⚠️	The leave approval process is manual, time-consuming, and requires me to contact multiple faculty members. Sometimes I do not know who is responsible for approving my request or what its current status is	Manual process Time consumption Multiple contacts Unclear responsibility Status ambiguity	
4	BECAUSE 🔍	Leave requests are communicated through paper forms, messages, or emails, there is no centralized tracking system, approvals may be delayed, and requests can be overlooked if the class teacher is unavailable	Paper-based system Fragmented communication No centralization Approval delays Request oversight Teacher unavailability	
5	WHICH MAKES ME FEEL 😞	Frustrated, uncertain, anxious about attendance shortages, and worried that my leave request may not be processed on time	Frustration Uncertainty Anxiety Attendance concerns Processing worries	

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A Student	Get my leave applications sorted out for my	It is a very long process starting from paperwork making its way	Faculty/HOD's aren't always available, and they have their	Tense, Annoyed, Unsure about

		personal/medical reasons.	through the hierarchy.	own schedules.	my permissions.
PS-2	Class Teacher	Complete all my duties on time for the students and others.	It also requires me personally signing their attendance letters.	Other faculty cannot directly award attendance without my consent at least.	Disappointed because I could not attend to the needy students.

3.2 Solution Requirements

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Authentication & Role Management	Authenticate users using the existing ServiceNow Users (sys_user) table. Assign App User role to students. Assign App Admin role to Class Teachers and HODs.
FR-2	Leave Request Management	Students can create leave requests.
FR-3	Leave Request Review and Response	Class Teachers can view assigned leave requests. Approve requests up to five days. Reject leave requests. Manually escalate requests exceeding five days to the HOD.
FR-4	HOD Approval functions	HOD can review escalated leave requests. Approve leave requests. Reject leave requests. Modify the number of approved leave days before approval.
FR-5	Workflow Automation	Trigger a Flow Designer workflow after every status change. Send approval email. Send rejection email. Send escalation notification email

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	The application shall provide intuitive Student and Faculty views with a simple and easy-to-use interface.
NFR-2	Security	Access shall be controlled using ServiceNow roles. Students may access only their own leave requests, while faculty members may access only assigned requests.
NFR-3	Reliability	The application shall accurately store leave requests and ensure workflow execution without data loss.

NFR-4	Performance	Leave requests, approvals, and email notifications should be processed with minimal delay under normal usage.
NFR-5	Availability	The application shall be available whenever the ServiceNow instance is operational.
NFR-6	Scalability	The system shall support increasing numbers of students, faculty members, and leave requests without requiring major design changes.

3.3 Data Flow Diagram: A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

3.4 Technology Stack

Table 1: Components & Technologies

S.No	Component	Description	Technology
1	User Interface	Student View & Faculty View	ServiceNow Workspace / Forms / Lists
2	Application Logic	Leave submission & validation	Business Rules
3	Workflow Automation	Approval workflow & notifications	Flow Designer
4	Database	User identities and leave requests	sys_user, Custom Leave Request table
5	Email Service	Approval / Rejection / Escalation emails	ServiceNow Notifications
6	Security	Role-based access	ACLs, x_leave_app.user, x_leave_app.admin
7	Infrastructure	Cloud platform	ServiceNow Cloud

Table 2: Application Characteristics

Characteristic	Description	Technology
Security	Role-based access for students and faculty	ACLs, Roles
Scalability	Supports increasing leave requests and users	ServiceNow Platform
Availability	Available whenever the ServiceNow instance is online	ServiceNow Cloud
Performance	Flow-based processing and lightweight forms	Flow Designer
Reliability	Centralized leave records and notifications	ServiceNow Database

4. PROJECT DESIGN

4.1 Problem Solution Fit

Section	Content
1. Customer Segment(s)	• College Students • Class Teachers • Head of Department (HOD)
2. Jobs-to-be-done / Problems	• Apply for leave quickly • Get timely approval • Track leave status • Reduce paperwork • Enable efficient faculty approval
3. Triggers	• Student needs leave due to illness, family emergency, or personal reasons • Upcoming exams or attendance concerns • Faculty receives a new leave request
4. Emotions (Before / After)	Before: Frustrated, uncertain, anxious about attendance. After: Confident, informed, satisfied, stress-free.
5. Available Solutions	• Paper leave forms • WhatsApp messages • Emails • Verbal requests through Class Representatives • Manual approval process
6. Customer Constraints	• No centralized tracking • Delayed approvals • Limited communication • Students unaware of request status • Faculty managing requests from multiple channels
7. Behaviour	• Students contact teachers via WhatsApp or email • Follow up repeatedly • Faculty reviews requests manually • Students wait for responses or reminders
8. Channels of Behaviour	Online: College portal, ServiceNow application, Email. Offline: Direct interaction with Class Teacher, HOD, or Class Representative.
9. Problem Root Cause	The college lacks a centralized leave management workflow. Leave requests are processed manually through different communication channels, resulting in delays, poor visibility, and inconsistent tracking.
10. Your Solution	Develop a ServiceNow Student Leave Automation System where students submit leave requests online. Requests are routed to the Class Teacher, who can approve, reject, or manually escalate requests exceeding five days to the HOD. HOD can approve, reject, or modify approved leave days. Flow Designer automatically sends email notifications whenever the leave status changes, and students can track the status of their requests through the application.

4.2 Proposed Solution

S.No	Parameter	Description
1	Problem Statement (Problem to be solved)	Colleges often manage student leave requests manually through paper forms, emails, or verbal communication. This leads to delayed approvals, lack of transparency, difficulty in tracking request status, and inefficient communication between students and faculty.
2	Idea / Solution Description	Develop a ServiceNow-based Student Leave Automation System where students submit leave requests digitally. Requests are reviewed by the Class Teacher, who can approve, reject, or manually escalate requests exceeding five days to the HOD. The HOD can approve, reject, or modify approved leave days. Flow Designer automatically sends email notifications for approved, rejected, and escalated requests, while students can track their leave status through dedicated application views.
3	Novelty / Uniqueness	The solution combines role-based access control, manual approval workflow, digital leave tracking, email notifications, and separate Student and Faculty views within a single ServiceNow application. It eliminates paper-based processing while keeping approval decisions under faculty control.
4	Social Impact / Customer Satisfaction	The application improves transparency, reduces paperwork, minimizes approval delays, and enhances communication between students and faculty. Students receive timely updates, while faculty members can efficiently manage leave requests through a centralized platform.
5	Business Model (Revenue Model)	The solution is intended for educational institutions as an internal digital service. It can be adopted by colleges or universities as part of their campus management system. Future deployment could follow a Software-as-a-Service (SaaS) subscription model for multiple institutions.
6	Scalability of the Solution	The application is built on the ServiceNow platform and can scale to support multiple departments, academic years, and institutions. Additional modules such as attendance integration, parent notifications, academic calendars, and analytics dashboards can be incorporated without major architectural changes.

4.3 Solution Architecture

5. PROJECT PLANNING & SCHEDULING

Product Backlog, Sprint Schedule, and Estimation

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority
Sprint-1	Project Setup	USN-1	Create scoped application, roles, Leave Request table, Student View, leave submission	8	High
Sprint-2	Approval Workflow	USN-2	Faculty View, Class Teacher approval, rejection, manual escalation to HOD	9	High
Sprint-3	HOD and Notifications	USN-4	HOD approval, modify leave days, Flow Designer, email notifications	8	Medium
Sprint-4	Testing and Documentation	USN-5	Testing, bug fixes, reports, final documentation, presentation	5	High

Project Tracker, Velocity & Burndown Chart: (4 Marks)

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	8	2 Days	22 June 2026	23 June 2026	8	23 June 2026
Sprint-2	9	2 Days	24 June 2026	25 June 2026	9	25 June 2026
Sprint-3	8	2 Days	26 June 2026	27 June 2026	8	27 June 2026
Sprint-4	5	1 Day	28 June 2026	28 June 2026	5	28 June 2026

Velocity:

- Total Story Points: 30
- Total Duration: 7 days

Average Velocity = $30 \div 7 \approx 4.3$ story points/day

6. FUNCTIONAL AND PERFORMANCE TESTING

2. Milestone 1 – Application Setup

Objective

Create the scoped application and initialize the project.

Activities Performed

- Created a new scoped application.
- Configured the application menu and modules.
- Prepared the development environment.

3. Milestone 2 – Database Configuration

Objective

Create the Leave Request table for storing leave applications.

Activities Performed

- Designed the Leave Request table.
- Added fields such as Student, Class Teacher, HOD, Leave Type, From Date, To Date, Status, Approved Days, and Comments.
- Configured reference fields to the ServiceNow Users table (sys_user).

4. Milestone 3 – User & Role Configuration

Objective

Configure users and application roles.

Activities Performed

- Created student user accounts.
- Created faculty user accounts.
- Assigned App User role to students.
- Assigned App Admin role to Class Teachers and HODs.

5. Milestone 4 – User Interface Development

Objective

Develop user-friendly interfaces for students and faculty.

Activities Performed

- Designed the Student Leave Request form.
- Configured separate Student and Faculty views.
- Implemented UI Policies for dynamic form behavior.

The screenshot shows the ServiceNow 'Leave Requests - New Record' form. The form is titled 'Leave Requests - New Record' and has a search bar. The form fields are organized into two columns. The left column contains 'Name', 'Regd Number', and 'Email'. The right column contains 'Leave Reason' (a dropdown menu with 'Health' selected) and 'Class Teacher'. Below these fields is a section titled 'Describe your leave necessity' which contains 'Description', 'From Date', and 'To Date' fields. A 'Submit' button is located at the bottom left of the form. The ServiceNow logo and navigation tabs are visible at the top.

6. Milestone 5 – Workflow Automation

Objective

Automate leave approval notifications.

Activities Performed

- Developed a Flow Designer workflow.
- Triggered the workflow whenever the leave status changes.
- Configured notification logic for Approved, Rejected, and Escalated states.

Ref:MSG0001703_MLHfRYfa7QxV9ufjXJCE

7. Milestone 6 – Application Testing

Objective

Validate the end-to-end functionality of the application.

Test Scenario 1

Student submits a leave request.

Expected Result:

Leave request is created successfully.

Status:

Passed

The screenshot shows the ServiceNow 'Leave Requests' interface. At the top, there's a navigation bar with 'All', 'Favorites', 'History', and 'Workspaces'. Below this is a search bar and a 'Leave Requests' button. The main area displays a table with the following columns: Name, Regd Number, Email, From Date, To Date, Leave Reason, Description, Class Teacher, Approve, Approved by, Reject, Rejected by, and Es. The table contains two rows of data:

Name	Regd Number	Email	From Date	To Date	Leave Reason	Description	Class Teacher	Approve	Approved by	Reject	Rejected by	Es
Chinna Rao	501	chinna@gmail.com	2026-06-27	2026-06-29	Health	I am suffering from fever and hence requ...	G Vijay Kumar	false	(empty)	false	(empty)	fal
Vijay Krishna	5b2	vk@gmail.com	2026-06-25	2026-07-10	Health	I am planning to go to a trip for 15 day...	G Vijay Kumar	false	(empty)	true	Ramesh Y	fal

At the bottom of the table, there is a pagination bar showing '1 to 2 of 2'.

Test Scenario 2

Class Teacher approves a leave request.

Expected Result:

Status changes to Approved and an email notification is sent.

Status:

Passed

Test Scenario 3

Class Teacher manually escalates a leave request exceeding five days.

Expected Result:

Request is forwarded to the HOD and an escalation email is sent.

Status:

Passed

Test Scenario 4

Faculty impersonation testing.

Expected Result:

Faculty can only access assigned leave requests.

Status:
Passed

The screenshot shows the ServiceNow interface for a 'Leave Request' form. The header includes the ServiceNow logo and navigation tabs: All, Favorites, History, and Workspaces. The current view is 'Leave Requests - Vijay Krishna'. A search bar is present on the right. Below the header, the form fields are organized into two columns. The left column contains fields for Name (Vijay Krishna), Regd Number (5b2), and a comment box. The right column contains fields for Leave Reason (Health) and Email (vk@gmail.com). Below these fields, there is a section titled 'Describe your leave necessity' with a 'Status' tab. This section includes checkboxes for 'Approve', 'Reject', and 'Escalate', and a 'Comment' box. To the right of this section, there are three input fields for 'Approved by', 'Rejected by', and 'Escalated by'. At the bottom left, there are 'Update' and 'Delete' buttons. A small link '(SN Utils) Versions (0)' is visible at the bottom left of the form area.

8 Development Summary

The Student Leave Automation System successfully implements a centralized leave management workflow using ServiceNow. The application integrates role-based access control, separate student and faculty interfaces, workflow automation through Flow Designer, and email notifications. All major functional requirements were implemented and validated through successful testing.

7. RESULTS

The screenshot shows the 'CREATE APP' interface in ServiceNow Studio. The browser address bar displays a URL starting with 'dev364409.service-now.com'. The left sidebar shows the 'Apps' section with a 'No apps to show' message and a 'Create' button. The main area is titled 'Let's get started on your new app.' and contains a form for creating a new application. The form fields are: Name (Student Leave Request Management), Description (This app aims to decrease the manual workload student...), and Scope (Scoped, Global). A 'Browse or drag to upload' button is next to the description field. A 'Continue' button is at the bottom right. The scope is set to 'None'.

CREATE APP

Let's get started on your new app.

Add a name and description that define the purpose of your app. You can also add a thumbnail image.

8. ADVANTAGES AND DISADVANTAGES

Advantages

1. Paperless Leave Management

Eliminates paper forms and manual documentation by digitizing the entire leave request process.

2. Centralized Leave Tracking

All leave requests are stored in a single system, making it easy for students and faculty to access and manage records.

3. Role-Based Access Control

Students can access only their own leave requests, while faculty members can review and manage requests assigned to them.

4. Improved Transparency

Students can view the status of their leave requests, reducing uncertainty and the need for repeated follow-ups.

5. Automated Email Notifications

The system automatically sends email notifications when a leave request is approved, rejected, or escalated.

6. Efficient Approval Workflow

Class Teachers can process leave requests directly and manually escalate requests exceeding five days to the HOD when necessary.

7. Reduced Administrative Workload

Faculty members can manage leave requests through a centralized interface instead of handling requests via multiple communication channels.

8. Secure User Management

User authentication is handled through the existing ServiceNow Users (sys_user) table with application-specific roles.

9. Scalable Architecture

The application can be extended to support multiple departments, additional approval levels, or integration with other campus systems.

10. Easy Maintenance

Since the application is built on the ServiceNow platform using configurable components such as Flow Designer and Business Rules, future modifications can be implemented with minimal effort.

Disadvantages

1. Requires ServiceNow Platform

The application depends on a ServiceNow instance and cannot operate independently without the platform.

2. Internet Dependency

Users must have an active internet connection to submit, review, or approve leave requests.

3. Manual Escalation Required

Leave requests exceeding five days require the Class Teacher to manually forward them to the HOD, which relies on timely faculty action.

4. Limited to Institutional Workflow

The application is designed specifically for student leave management and requires customization for use in other domains.

5. Initial User Configuration

Student and faculty accounts, roles, and reference fields must be configured before the system can be used effectively.

6. Email Delivery Dependency

Notifications depend on proper email configuration within the ServiceNow instance.

7. No Attendance Integration

The current implementation does not automatically synchronize approved leave with the institution's attendance management system.

8. Limited Reporting Features

Basic reporting is supported, but advanced analytics and dashboards require further development.

9. CONCLUSION

The **Student Leave Automation System** successfully demonstrates how the ServiceNow platform can be utilized to digitize and streamline the student leave approval process within educational institutions. The application replaces traditional manual methods with a centralized, role-based system that enables students to submit leave requests online while allowing Class Teachers and Heads of Department (HODs) to efficiently review, approve, reject, or manually escalate requests based on institutional policies. Through the implementation of ServiceNow features such as scoped applications, custom tables, Business Rules, Flow Designer, UI Policies, roles, and email notifications, the system provides a structured and transparent workflow that improves communication and reduces administrative effort.

The project successfully achieved its primary objectives by providing a secure, user-friendly, and scalable leave management solution. Functional testing verified that all major features—including leave submission, approval workflow, manual escalation, status tracking, and automated email notifications—performed as expected. Overall, the proposed solution enhances operational efficiency, improves the user experience for both students and faculty, and serves as a strong foundation for future enhancements such as attendance integration, mobile access, analytics dashboards, and advanced reporting capabilities.

10. FUTURE SCOPE

The Student Leave Automation System provides a strong foundation for digital leave management and can be further enhanced with additional features to improve functionality and user experience. Future enhancements may include integration with the institution's attendance management system to automatically update attendance records after leave approval, eliminating manual intervention. The application can also be extended with a dedicated mobile interface, enabling students and faculty to submit and review leave requests from smartphones.

Additional improvements include implementing analytics dashboards to monitor leave trends, department-wise statistics, and approval turnaround times. The system can be integrated with academic calendars to validate leave requests against examination schedules and institutional holidays. Multi-level approval workflows can be introduced for larger institutions requiring approvals from additional authorities. Furthermore, SMS or mobile push notifications can complement email notifications for faster communication. These enhancements would make the application more comprehensive, scalable, and suitable for deployment across multiple educational institutions while continuing to improve administrative efficiency and the overall user experience.
